

30–60–90 Day Plan – Engineering Manager, Streaming Apps

First 30 Days - Learn & Build Trust

Goals:

- Establish strong relationships with engineers, product, QA, design, and stakeholders
- Gain deep understanding of app architecture, core components, and dependencies
- Learn development workflows, CI/CD pipeline, and release process
- Participate in code reviews and team rituals
- Identify quick wins and early improvement opportunities

Outcome:

- Contributing to code reviews
- Clear understanding of app, architecture, and deployment process
- Strong initial relationships across team and stakeholders

Days 31-60 - Contribute & Align

Goals:

- Provide coaching and feedback to team members
- Partner closely with Product Manager on roadmap execution
- Identify and begin addressing technical debt and process gaps
- Improve development workflows, testing practices, and CI/CD reliability
- Actively participate in incident response and operational reviews

Outcome:

- Trusted contributor in technical and product discussions
- Solid grasp of development and release lifecycle
- Strong working relationships with team and stakeholders

Days 61-90 - Lead & Optimize

Goals:

- Drive improvements in architecture, performance, and reliability
- Establish consistent team execution rhythm and accountability
- Improve release predictability and quality through process and tooling
- Define and track key engineering metrics including stability and delivery speed
- Act as primary bridge between engineering and stakeholders

Outcome:

- Fully engaged in performance management and team development
- Deep understanding of systems and end-to-end delivery
- Measurable improvements in team effectiveness, quality, and delivery

90-Day Success Summary

Outcome:

- Trusted leader with strong team and stakeholder relationships
- Fully ramped on app architecture, development, and deployment
- Actively improving engineering quality, speed, and reliability
